

INSTALLATION OF SATELLITE DISHES

Obtain an **ACC Form** with **Hold Harmless Agreement** from the JSN Website and have approved by the Board before installing dish.

NOT ALLOWED:

DO NOT screw or attach to any part of the chimney.

DO NOT screw or attach to the siding.

DO NOT screw or attach to the roof.

ALLOWED:

The dish can be attached to and only to the 10 inch trim which is pictured below. No penetration to the building is allowed, other than to attach the bracket. If penetration is necessary, you must get approval as to where the penetration is going to be and notify the Board and get their approval before the work can be completed. You already have cable running through your unit, so if the installer tries to suggest that you need new cabling ask the installer to try your original cabling first. If you are having problems, you may just need new ends installed. Try these suggestions first before getting new cabling installed. Cabling must be secured to the building discretely and may not run on or over gutters.
